

APPROVED 2000 TAX SOFTWARE

Tax practitioners who are considering the use of a software package to prepare 2000 Maine income tax forms should verify with Maine Revenue Services that the software considered has been approved. Only approved computer-generated substitute forms can be processed by Maine Revenue Services' imaging and scanning system. Below is a list of software developers and the currently approved forms for each. Maine Revenue Services approves only the appearance and scanability of forms. **Internal software calculations are not Maine Revenue Services approved or checked.**

Individual forms:

Business forms:

In addition to those listed above, other software developers may provide acceptable substitute forms. So called second-level developers purchase forms templates from developers with approved forms and use those templates for variable data programming. If your software company purchases forms templates from one of the above listed companies, any form approved for the seller can also be assumed to be approved for the buyer.
